

CLAUDE CODE HACKATHON

Org Impact Simulator

A workforce scenario planning engine that shows leaders the likely impact of change before it happens.

Org shape

Employee Sentiment

Talent Movement

Git Blame (It's Always HR)

Lamar Foster · Erica Paglieri · Sadia Sleweon · Reese McGillie

THE PROBLEM

Leadership decides on intuition, not evidence.

Historical talent data explains what already happened but it doesn't model what a proposed change will do. Leaders face this gap for changes of every kind:

- A reorg, hiring freeze, or wind-down
- A new policy or operational process
- An external shift — labor market, funding, economic conditions

V1 FOCUS

This prototype models external shifts only — not internal decisions like “we choose to reorg” — unless framed as a response to one.

THE SOLUTION

Pose a “what if,” get a grounded projection.

A Claude Code–powered simulator ingests anonymized historical talent data and projects the impact of an external shift across three dimensions while showing its reasoning at every step.

Org shape

Spans, layers, and structural ratios shift

Employee Sentiment

Directional shift based on comparable past changes

Talent Movement

Ability to attract and retain talent.

All input data is anonymized and desensitized before use.

HOW IT WORKS

Real external signal, reasoned step by step.

Three doors, one room

Users start their scenario with natural language, a pre-built card, or sliders and all three feed the exact same output view.

SUCCESS LOOKS LIKE

A prototype leaders can actually act on.

A plain-language scenario in and an explainable projection out. A solution delivered in a form that lands at every altitude of decision-making.

Built for

- Chiefs of Staff & Executives
- Operations leaders
- Talent Acquisition
- Legal and Internal Comms

Used for

- Annual planning
- Ongoing headcount & resource planning
- Ad hoc support for internal events
- Ad hoc response to external events

16 countries · 13 currencies · many industry sectors: one connected view of the workforce

SUCCESS LOOKS LIKE

A prototype leaders can actually act on.

Org Impact Simulator

Grounded in 462,193 job applications across 3,039 requisitions and 5,083 employee movement events, 2018-Q1 – 2026-Q3. External context from Our World in Data and WHO GHO.

Historical evidence **Describe a scenario** Pick a scenario Adjust conditions Result

DESCRIBE THE SHIFT

e.g. A 20% cut to federal grant funding takes effect next quarter.

Describe an external shift — a funding change, labour market condition, regulatory or economic change. Internal decisions (a reorg, a hiring freeze) are accepted too; you will be asked to tag what triggered them.

SCOPE AFFECTED	TYPE OF SHIFT	TIMEFRAME	MAGNITUDE	TRIGGERING CAUSE
Whole organisation	Funding	2 quarters	-20%	External shift
