

whiteboard → sprint

Interrogate before you write.

Turns whiteboard photos and meeting transcripts into Jira tickets — and refuses to write the vague ones.

[names]

Planning evaporates. The “fixes” make it worse.

01 Decisions vanish

Whiteboards and meetings hold real decisions that never reach a tracker.

02 Automation amplifies ambiguity

Transcript-to-ticket tools can turn “fix the sync” into twelve backlog items.

03 False progress costs twice

A vague ticket looks like progress — until someone has to re-run the meeting.

The problem is not transcription. It is judgment.

02 — NOT WRITING YET • QUESTION 1/3

affects 1 ticket • referent

What does “the sync” refer to?

Kafka ingest job (raw → staging)

Nightly Databricks-to-warehouse sync

Portal-to-Collibra metadata sync

or type an answer

don't know

“don't know” holds the ticket instead of guessing.

THE HOLD RAIL

6 items read

Fix the sync

HELD — waiting on “the sync”

Resolve retention flags on archived tables

HELD — waiting on “retention flags”

Investigate the retry logic

HELD — waiting on “the retry logic”

Fix portal auth 403 errors in dev

M

- ✓ Login flow in dev no longer returns 403 for valid sessions
- ✓ Root cause documented (token scope, expiry, or config)

SOURCE — “portal auth 403s in dev”

Clean up logging

HELD — waiting on “clean up”

Produce deletion report for Kate

S

- ✓ Report delivered to Kate before Friday
- ✓ Covers all archived-table deletions to date

SOURCE — “Kate needs the deletion report before Friday”

DEPENDENCIES

ingest → transform • observed
transform → publish • inferred

03 — WRITE

JIRA PROJECT

SANDBOX

sizing calibrated from 47 closed issues

☒ dry run off

- [M] EDS-214 Fix portal auth 403 errors in dev
 - [S] EDS-215 Produce deletion report for Kate
 - [L] EDS-216 Add retention flags to archived-table schema
 - [M] EDS-217 Investigate and stabilize retry logic
 - [S] EDS-218 Remove verbose debug logging from ingest pipeline

01 — WHAT WAS ON THE BOARD

+ drop a whiteboard photo

Sprint planning, EDP team, whiteboard notes:

- ingest -> transform -> publish (arrow ingest to transform)
- fix the sync, broken since Tues
- retention flags on archived tables?
- someone should look at the retry logic
- portal auth 403s in dev
- clean up logging
- Kate needs the deletion report before Friday

READ THE BOARD

sample

Tickets appear here as ghosts.
They solidify only when the
ambiguity blocking them is resolved.

It asks before it writes.

A held ticket is an output, not a failure.

When the title still says “the sync,” it does not guess. It asks the one question that unblocks the most tickets.

Four steps. One deliberate refusal.

Guardrails in deterministic C# — not entrusted to model output.

The hold rail

Tickets appear as ghosts. They solidify only when the ambiguity blocking them is resolved.

Not writing yet.

whiteboard → sprint

HELD 2READY 1WRITTEN 0

Sprint ready

Update ADF enrollment synchronization pipeline

3 pts

Add alert when enrollment latency exceeds 30 min

2 pts

Created / dry run

Label: wb-sprint-2026-08-14 • Sandbox: EDP-DEMO

Each ticket carries its source, acceptance criteria, and a size anchored to a real past issue. Held ones stay held.

Under the hood

Deterministic rails

Allowlist, create-only, forced label, hard cap. Pure C#, unit-tested.

Per-user OAuth

Atlassian 3LO + PKCE. Tokens stay server-side.

.NET 10 on Azure Container Apps

Key Vault + managed identity. Matches the EDP stack.

Reusable

Ships as a Claude skill the whole team installs.

The best tools know when to stop.

Build fast. Refuse safely. Leave a better backlog.
